# Instruo Frontend Team Task

👋 Greetings from team Instruo ✨ We guess you are as excited as we are for this year's Instruo and we can't wait to have you onboard, but before that please let us know you a bit better, complete the given task and show us what you've got 🔥

## Main Task

- Go to https://www.atlassian.com/software/jira and try to build a replica of this webpage.
- What you build **must be responsive**.
- We **don't want any functionality** out of it, we just want the **visual design** (it includes scroll and hover effects).
- If you think you are **creative enough** you could **modify the design** in your own way, we would love to see that. But **if you are unsure just try to clone it**. We want to see how proficient you are at building a frontend.
- Clone the **homepage only**, we won't be evaluating the others.
- Use your framework of choice, **Vue/React preferred**.
- **Server side rendering not allowed**.
- After you are done push your repo to github and deploy it on Netlify/Vercel or wherever you want.

### Extra points

- Keep your codebase clean and modular.
- Everyone loves PWAs (https://web.dev/progressive-web-apps/) isn't it? Try to make your site into one.
- We prefer smaller bundle size (we won't be taking image assets into consideration).
- And lesser load times as well (No one loves to wait).
- We would be auditing performance, PWA and best practices through Lighthouse (https://developers.google.com/web/tools/lighthouse/) as well.

P.S. - We love dark mode, so here it is to make sure your eyes don't bleed 😉. Go grab some coffee and get started. Wish you all the best.

Regards,
Team Instruo
